SUMMARY

Data Analyst with 3+ years of experience leveraging SQL, Python, and BI tools to analyze large-scale datasets and deliver actionable insights across healthcare and technology domains. Proven track record of identifying cost drivers, building forecasting models, and developing KPI dashboards that support strategic decision-making and operational efficiency. Strong foundation in statistical analysis, data validation, and cross-functional collaboration within data-driven environments.

TECHNICAL SKILLS

Languages:	Python (Pandas, NumPy), SQL, R
Databases:	PostgreSQL, MySQL, Snowflake, Oracle
Data Engineering & ETL:	Airflow, dbt, Informatica, SQL-based ETL
Visualization:	Power BI, Tableau, Excel (Power Query, Pivot Tables)
Cloud & Big Data:	AWS (S3, Lambda), GCP, Azure, PySpark
Analytics & Statistics:	A/B Testing, Hypothesis Testing, Regression, Time Series, Monte Carlo Simulation
Tools:	Git, JIRA, Confluence

EXPERIENCE

Data Analyst | CVS Health | USA

Aug 2025 – Present

- Analyzed healthcare claims data for 5M+ members using advanced SQL (CTEs, window functions) and statistical techniques, identifying high-cost cohorts where the top 10% contributed to \$75M in annual spend and isolating key cost drivers influencing healthcare expenses.
- Evaluated utilization patterns across ER visits, prescriptions, and imaging services, identifying \$2M in avoidable costs within analyzed segments and recommending targeted strategies to reduce unnecessary healthcare utilization.
- Applied hypothesis testing and statistical analysis to validate treatment patterns and cost variations, supporting data-driven decision-making in healthcare strategy and improving the reliability of analytical conclusions.
- Benchmarked provider performance across 8,500+ providers using Tableau, uncovering 15% variation in cost and quality metrics and enabling data-backed network optimization initiatives.
- Developed time-series forecasting models (ARIMA, Prophet in Python) to project healthcare cost trends and specialty drug spend with 93% accuracy, supporting financial planning and budget forecasting processes.
- Designed and deployed Power BI dashboards tracking 35+ KPIs related to population health and cost metrics, enabling leadership to monitor trends and make timely, data-driven decisions.
- Improved data reliability by implementing validation checks and transformation workflows using Python and dbt, ensuring consistency, accuracy, and integrity across analytical datasets.

Data Analyst | Coforge | INDIA

Sep 2021 – Dec 2023

- Built predictive models (logistic regression, random forest in Python/R) using 200+ features to forecast operational risks and performance variability 45 days in advance with 82% accuracy, enabling proactive risk mitigation and planning.
- Analyzed application and user activity data using advanced SQL (PostgreSQL, CTEs, window functions), identifying 120+ high-risk anomalies based on behavioral patterns and system performance indicators.
- Collaborated with product, engineering, and operations teams to translate analytical findings into actionable improvements, enhancing system performance, stability, and operational efficiency.
- Simulated operational scenarios using Monte Carlo methods (NumPy with 10,000 iterations) to support capacity planning decisions and optimize resource allocation strategies under uncertainty.
- Developed interactive dashboards using Power BI and Tableau to track application KPIs, user engagement, and system performance metrics, improving stakeholder visibility and monitoring capabilities.
- Consolidated multi-source datasets, including application logs and user activity, through SQL-based ETL pipelines, enabling comprehensive analysis of system performance and user behavior.
- Communicated insights through structured data storytelling and visualizations, influencing product and engineering decisions with clear, actionable recommendations.

PROJECTS

Glassdoor Review Analysis | Python, Power BI

- Cleaned and transformed 10K+ employee reviews using Pandas and NumPy, improving data quality for accurate and consistent analysis.
- Performed EDA and feature engineering (tenure bands, job roles, locations) to identify key drivers of employee satisfaction, improving segmentation insights and uncovering workforce trends.
- Built interactive Power BI dashboards to track sentiment trends and workplace KPIs across companies, enabling benchmarking and data-driven HR insights.

E-commerce Sales & Logistics Analysis | SQL (BigQuery), Tableau

- Analyzed 100K+ order records using Google BigQuery to identify 20% YoY sales growth and uncover customer retention patterns influencing repeat purchases.
- Investigated regional shipping delays (23+ days vs 15 days baseline) and recommended process improvements that enhanced delivery performance by 15% in underperforming regions.
- Developed Tableau dashboards to monitor sales trends, delivery performance, and payment behavior (70% credit card usage), supporting operational and financial decision-making.

EDUCATION

Masters in Computer Science | University of Central Missouri, USA

Dec 2025

CERTIFICATION

Microsoft Power BI Data Analyst Associate
